

SELECT ENGINEERING SERVICES LLC.

Capability Statement

PROFILE

Select Engineering Services (SES) is a small business specializing in wearable sensors and personal security devices to help keep people safe.

CAGE: 62LV1
DUNS: 831755280
NAICS: 334290

CORE COMPETENCIES

- ✓ Sensor development
- ✓ Attack detection
- ✓ Wireless communications
- ✓ Automated notifications
- ✓ Software integration

DIFFERENTIATORS

- Our patented AID technology is the only wearable sensor that detects a shooting or stabbing
- Unique product designs with simple set-up and minimal maintenance
- Integration with various communication solutions and enterprise systems
- Proven ability to deliver on customer needs
- Agile small business with additional capabilities through partnerships

AUTOMATIC INJURY DETECTION (AID)

The Automatic Injury Detection system provides help in seconds when the sensing panel has been pierced by a bullet, knife or shrapnel from an IED. Worn in the body armor, the AID sensor sends an automated emergency alert to a phone, radio or via other communication system. The automated, instant alert helps save lives.

"If we're not talking officer safety and sending our men and women safely home to their families then we're not having a conversation I want to have" Sheriff Hank Partin, Montgomery County, VA

PERSONAL EMERGENCY TRANSMITTER (PET)

The Personal Emergency Transmitter improves personal safety with the simple press of a button. Pressing the PET device automatically sends emergency text messages and your GPS location to pre-defined recipients. PET includes an app that is compatible with both Android smartphones and iPhones. PET is an ideal safety solution for agencies and consumers alike.

Automated Message:
Sue Taylor, LIC0609
has triggered an
emergency alert!

"PET has been a great fit for our Community Supervision personnel...a simple method to automatically alert responders is critical."
CIO, GA Dept of Community Supervision
